Dear Lederberg

It was a surprise to see these letters when I opened yours! Thanks for the trouble. Hope you got the anti- λ serum, not as good as I had hoped but I am injecting this rabbit some more; so in a few weeks I hope to have another 50 cc of $K \approx 400$ to 500. But at $K = 150$, as the one I sent you it is quite useful.

With your strains so far the results are that they do multiply the λ HFT Gal⁺ not as efficiently as C600 Gal⁺ but quite well (Remember: C600 Gal⁺ multiplies the λ HFT about 50% while) Gal⁻ and Gal⁻₂ give about 10% and 25% resp. of HFT in their burst of about 60 to 80 ph/bact)

Am preparing the Gal⁻, Gal⁻₂ and already have the Gal⁻ and Gal⁻₂ homogenates...

Will keep you posted after the visit of Morse this week end.

Thanks again

Wrigley.
